# Effects of Novel Coronavirus (COVID-19) on Civil Aviation: Economic Impact Analysis

Montréal, Canada  
20 April 2020

- **Scenario Building**
- **Scenario Analysis**
  - Impact on International Passenger Seat Capacity (Supply)
  - Impact on International Passenger Numbers (Demand)
  - Impact on Gross Passenger Operating Revenues of Airlines
- **Summary of Key Impact Indicators**
- **Appendix**
  - A: Situation Overview
  - B: Summary of Analysis by Other Organizations
  - C: Route Group Level Analysis (both international and domestic passenger traffic)

The latest estimates indicate that the possible COVID-19 impact on scheduled international passenger traffic for the first 9 months of 2020, compared to Baseline (business as usual, originally-planned), would be:

### V-shaped path (a first sign of recovery in late May)

- Overall reduction ranging from **41% to 56% of seats offered by airlines**
- Overall reduction of **705 to 963 million passengers**
- Approx. **USD 160 to 218 billion potential loss** of gross operating revenues of airlines

### U-shaped path (restart in third quarter or later)

- Overall reduction ranging from **57% to 67% of seats offered by airlines**
- Overall reduction of **961 to 1,117 million passengers**
- Approx. **USD 218 to 253 billion potential loss** of gross operating revenues of airlines

The impacts depend on duration and magnitude of the outbreak and containment measures, the degree of consumer confidence for air travel, and economic conditions, etc.

## Scenario Building

**As overall severity and duration of the pandemic are still uncertain, six different recovery paths under two indicative scenarios are developed to explore the potential “short-term” economic implication of the COVID-19 pandemic.**

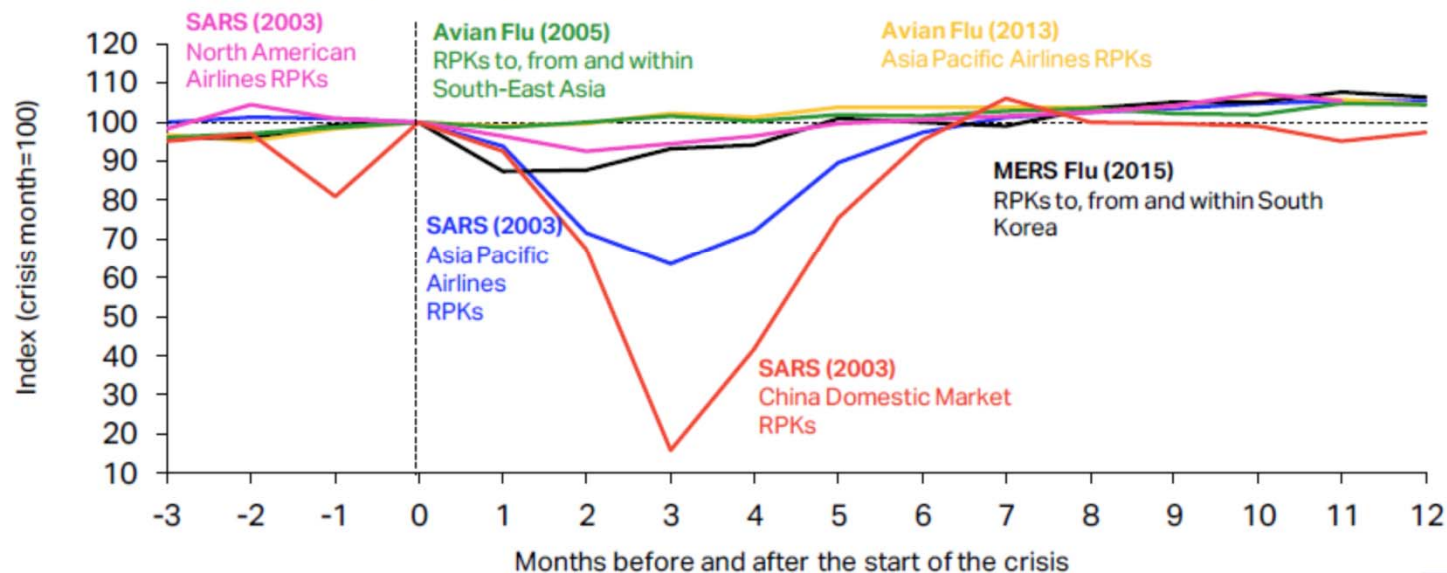

- 3 scenarios to assess the possible economic impact of COVID-19:
  - **Baseline**: counterfactual scenario, in which the COVID-19 pandemic does not occur, that is, **originally-planned** or **business as usual**
  - **Scenario 1: V-shaped** path, normal shape for recession, a brief period of contraction followed by quick/smooth recovery
  - **Scenario 2: U-shaped** path, prolonged contraction and muted recovery, possibility of not to return to trend line growth (L-shaped)
- Analytical focus, for the time being, on:
  - Near-term, i.e. monthly profile from **January to September 2020**
  - Scheduled **international passenger** traffic

- Scenarios 1 and 2 are **not forecasts** of what is most likely to happen. Given a rapidly changing environment, these scenarios are merely indicative of **possible paths or consequential outcomes out of many**.
- The exact path (depth, length and shape) will depend upon various factors, inter alia, duration and magnitude of the outbreak and containment measures, availability of government assistance, consumer confidence, and economic conditions.
- Scenarios 1 and 2 are differentiated in terms of **supply (output) and demand (spending)** conditions, mainly, a) the timing and scale of airline capacity decline and recovery, and b) the degree of consumer confidence in air travel that can be translated into demand or load factor.

# Previous outbreaks/pandemics had a V-shaped impact on aviation

Impact of past disease outbreaks on aviation

Source: IATA Economics using data from IATA Statistics

The impact of COVID-19 has already surpassed the 2003 SARS outbreak which had resulted in reduction of annual RPKs by 8% and USD 6 billion revenues for Asia/Pacific airlines. **The 6-month recovery path of SARS might not apply to today's situation.**

- How long will the pandemic last and what will be the severity levels?
- How deep and how long will the global recession be?
- How long will lockdowns and travel restrictions continue?
- How fast will consumer confidence in air travel be restored?
- How long can the air transport industry withstand the current financial adversity?

- **Baseline (counterfactual, no COVID-19 pandemic )**
  - **Originally-planned or business as usual:** trend line growth from 2019 level
- **Scenario 1 (V-shaped path, a first sign of recovery in late May)**
  - **Path 1:** Smooth capacity recovery to 75% of Baseline level by September but weak demand return
  - **Path 1a:** Strong capacity rebound to 90% in tandem with quick demand return
  - **Path 1b:** Slow progression to recover 50% capacity by September with downside risk in demand
- **Scenario 2 (U-shaped path, restart in 3Q or later)**
  - **Path 2:** Slow progression of capacity recovery to 40% of Baseline with sluggish demand growth
  - **Path 2a:** Strong capacity rebound to 70% by September, outpacing demand recovery
  - **Path 2b:** Prolonged downturn towards September or later with marginal summer adjustments

Assumptions (Global)	Baseline (Originally-planned)		Scenario 1 (V-shaped)		Scenario 2 (U-shaped)			
	Seat capacity	Passenger load factor	Seat capacity	Passenger load factor	Seat capacity	Passenger load factor		
January 2020	Airlines' schedules filed with OAG as of 6 January 2020		Actual capacity based on ICAO ADS-B data	January 2020 results by region/route group	Actual capacity based on ICAO ADS-B data	January 2020 results by region/route group		
February 2020				February 2020 results by region/route group		February 2020 results by region/route group		
March 2020				15 to 25 percentage points lower than Baseline		25 percentage points lower than Baseline		
April 2020	Maximum number of seats departing from each State/route group, which were taken from airlines' schedule data (OAG) during the period from 6 January 2020 to 20 April 2020	Forecasted 2020 load factor by region/route group, based on ICAO long-term traffic forecasts (LTF), which was adjusted monthly by difference between 2019 actual monthly results (ICAO, IATA) and 2019 LTF forecasted load factor	Most recent airlines' schedules filed with OAG or world average of -91% from Baseline whichever is smaller	25 percentage points lower than Baseline with adjustment of GDP impact by region/route group	Most recent airlines' schedules filed with OAG or world average of -91% from Baseline whichever is smaller	25 percentage points lower than Baseline with adjustment of GDP impact by region/route group		
May 2020			Most recent airlines' schedules filed with OAG or world average of -86% (1 & 1b) and -81% (1a) from Baseline whichever is smaller	20 (1), 15 (1a) and 25 (1b) percentage points lower than Baseline with adjustment of GDP impact by region/route group				
June 2020			Most recent airlines' schedules filed with OAG or world average of -71% (1), -61% (1a) and -76% (1b) from Baseline whichever is smaller	15 (1), 10 (1a) and 20 (1b) percentage points lower than Baseline with adjustment of GDP impact by region/route group			20 (1 & 1a) and 25 (1b) percentage points lower than Baseline with adjustment of GDP impact by region/route group	
July 2020			Most recent airlines' schedules filed with OAG or world average of -51% (1), -36% (1a) and -66% (1b) from Baseline whichever is smaller	10 (1), 5 (1a) and 15 (1b) percentage points lower than Baseline with adjustment of GDP impact by region/route group			Most recent airlines' schedules filed with OAG or world average of -81% (1), -76% (1a) and -86% (1b) from Baseline whichever is smaller	20 (1 & 1b) and 15 (1a) percentage points lower than Baseline with adjustment of GDP impact by region/route group
August 2020			Most recent airlines' schedules filed with OAG or world average of -36% (1), -21% (1a) and -56% (1b) from Baseline whichever is smaller				Most recent airlines' schedules filed with OAG or world average of -66% (1), -51% (1a) and -81% (1b) from Baseline whichever is smaller	15 (1), 10 (1a) and 20 (1b) percentage points lower than Baseline with adjustment of GDP impact by region/route group
September 2020			Most recent airlines' schedules filed with OAG or world average of -26% (1), -12% (1a) and -51% (1b) from Baseline whichever is smaller	10 (1), 5 (1a) and 20 (1b) percentage points lower than Baseline with adjustment of GDP impact by region/route group			Most recent airlines' schedules filed with OAG or world average of -61% (1), -31% (1a) and -81% (1b) from Baseline whichever is smaller	

- **Seat capacity (Baseline):** OAG airlines schedule data; Route Online; and airline websites
- **Seat capacity (actual):** ICAO ADS-B operational data
- **Load factor:** ICAO long-term traffic forecasts (LTF); ICAO statistical reporting forms; IATA economics data; and airline news release
- **Average fare (yield):** ICAO-ICM MIDT passenger origin-destination data; and ICAO cost studies
- **Macroeconomic factors:** Income elasticity of demand estimated for ICAO LTF; and IMF economic outlook data

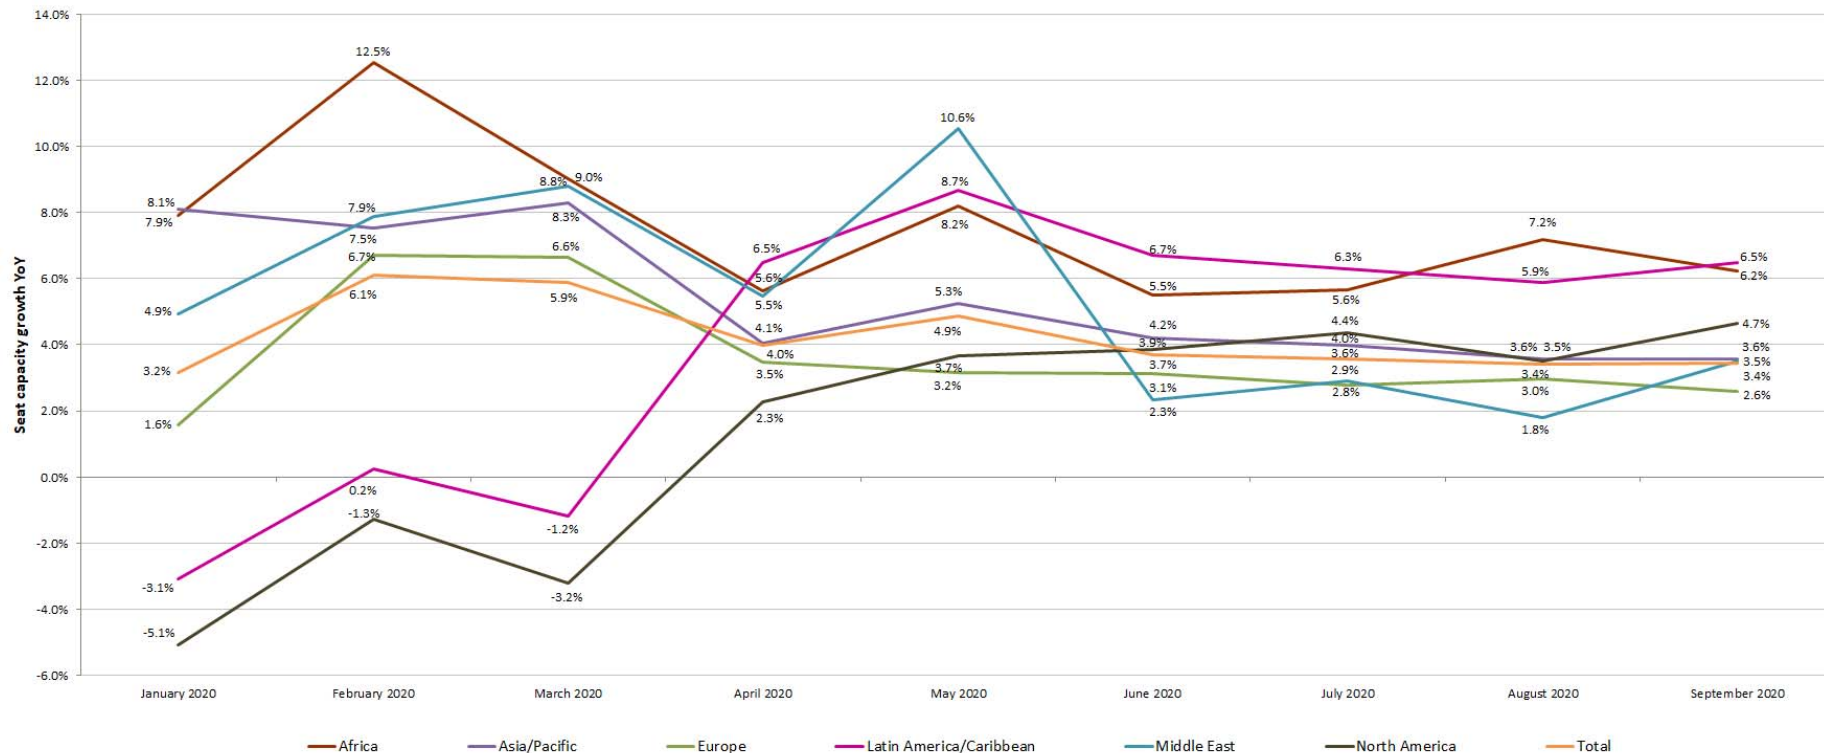

## Scenario Analysis

Figures and estimates herein is **subject to substantial changes**, and will be updated with the situation evolving and more information available.

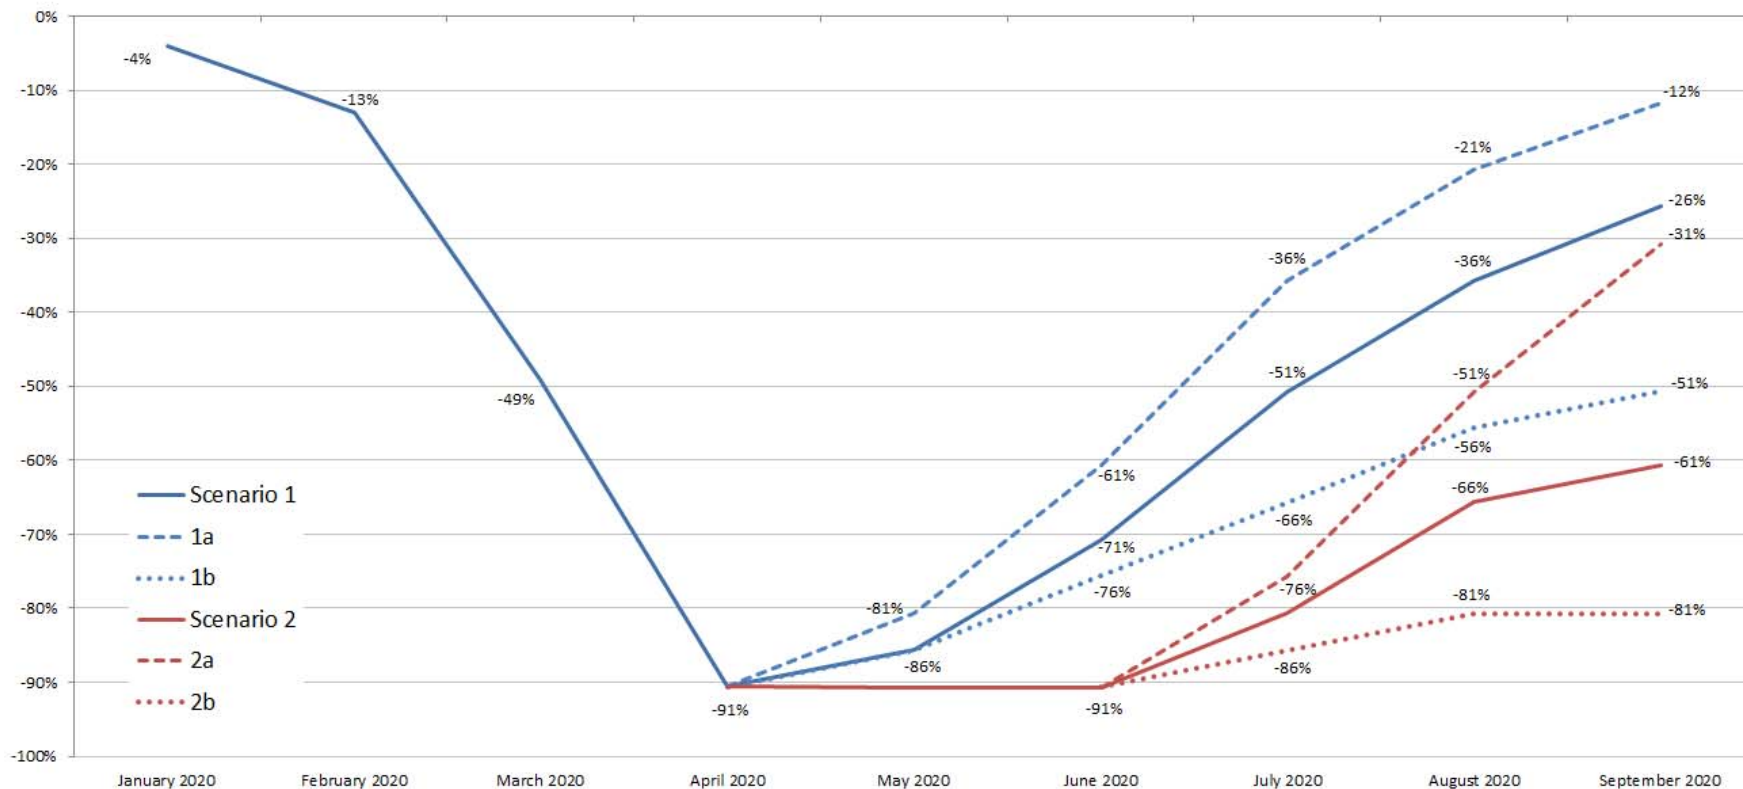

## Impact on International Passenger Seat Capacity (Supply)

- Prior to the outbreak, airlines had planned to increase seat capacity by 4.2% for the first 9 months of 2020, compared to the same period of 2019.
- According to the latest estimates, passenger seat capacity could instead drop from the above Baseline by 41 to 56% (Scenario 1) and 57 to 67% (Scenario 2).
- This capacity level would be 39% to 54% (Scenario 1) and 55% to 66% (Scenario 2) below the 2019 level.
- Biggest capacity reduction is expected to be in Europe and Asia/Pacific, followed by North America.

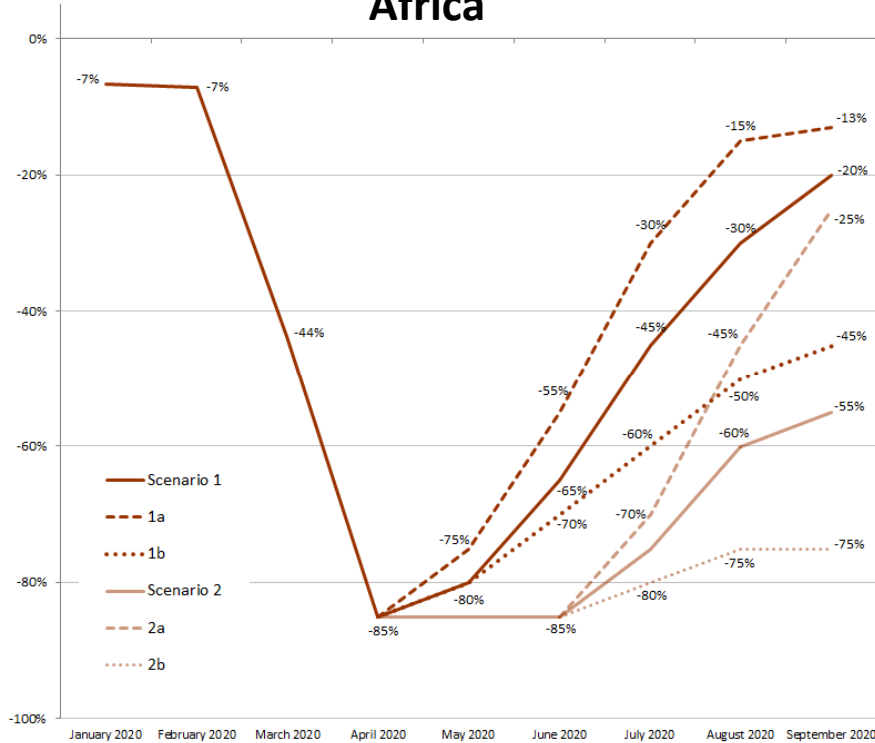

# Scenarios 1 & 2: 41 to 67% seat capacity reduction from Baseline

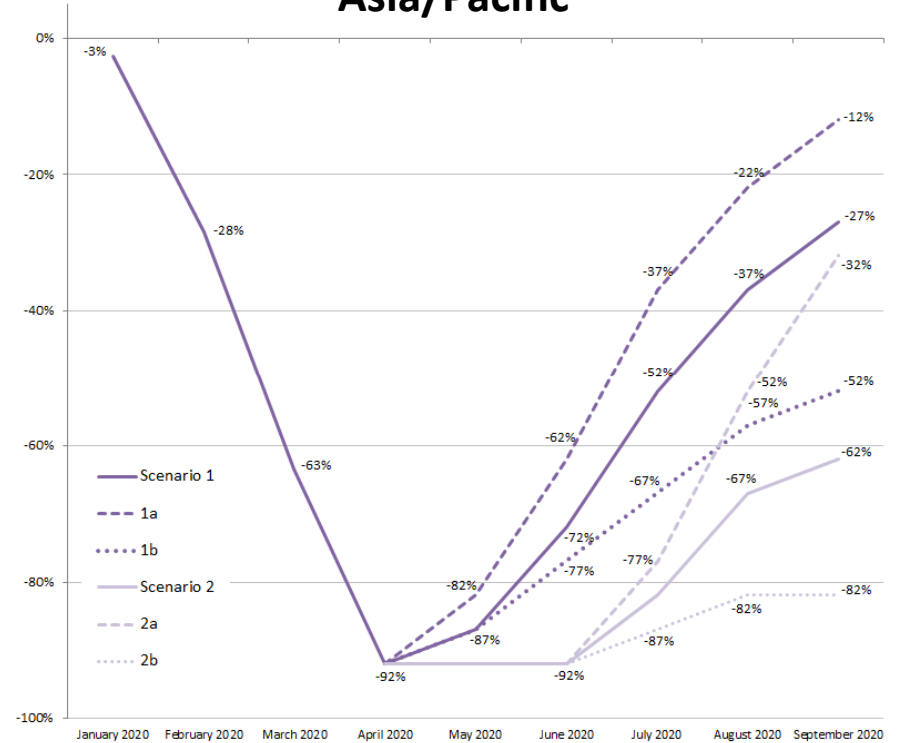

# Break-down of seat capacity reduction by region (1)

## Africa

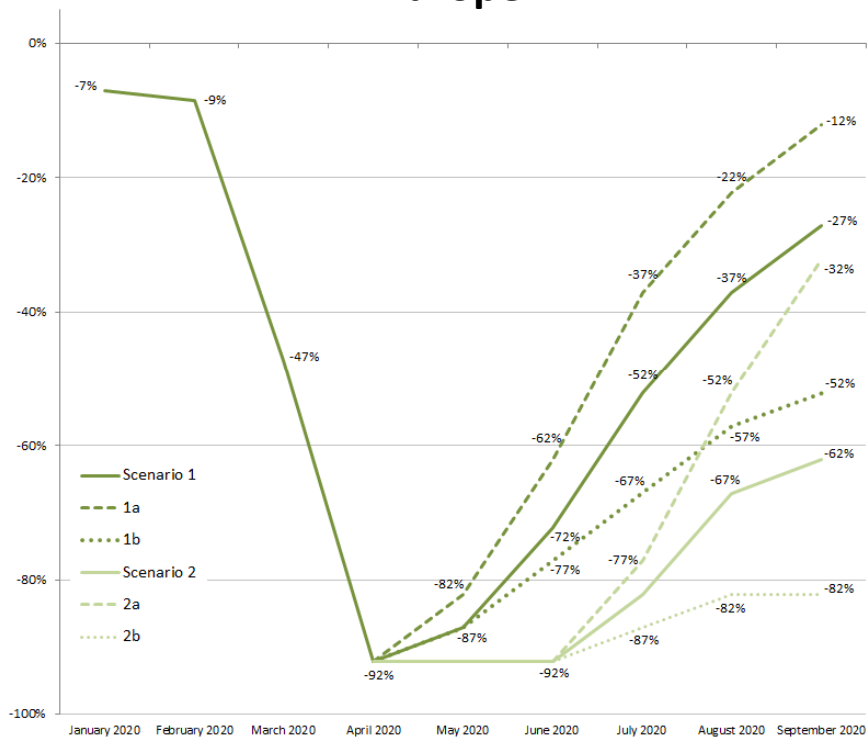

## Asia/Pacific

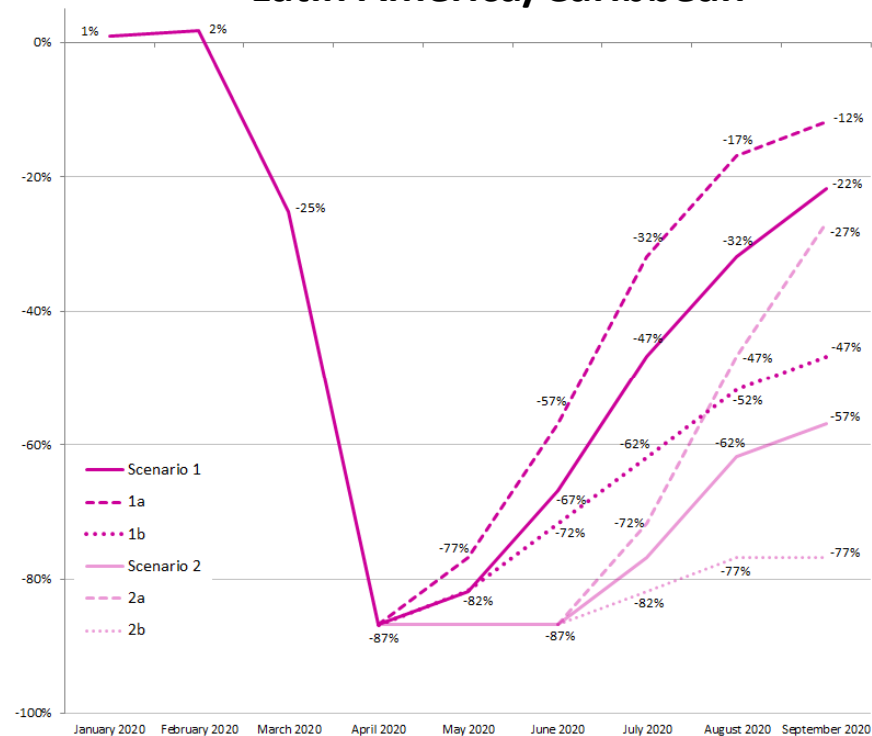

# Break-down of seat capacity reduction by region (2)

## Europe

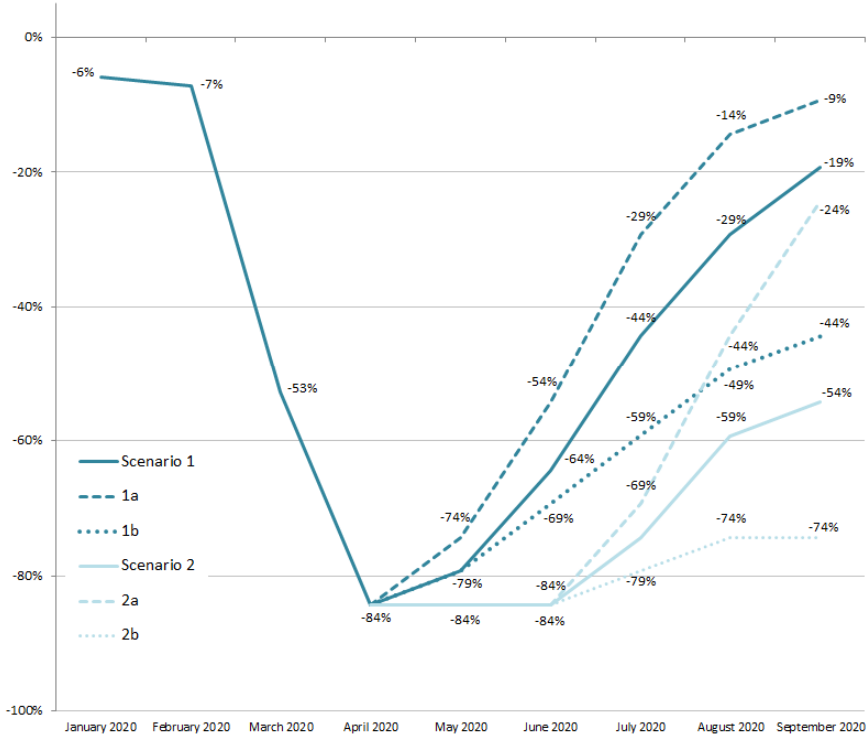

## Latin America/Caribbean

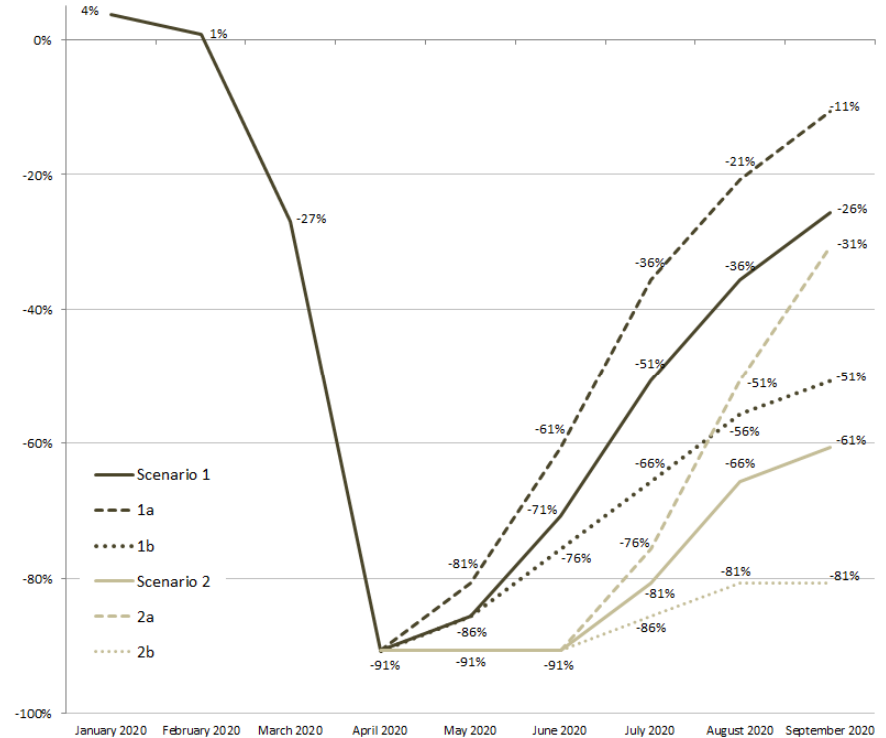

# Break-down of seat capacity reduction by region (3)

## Middle East

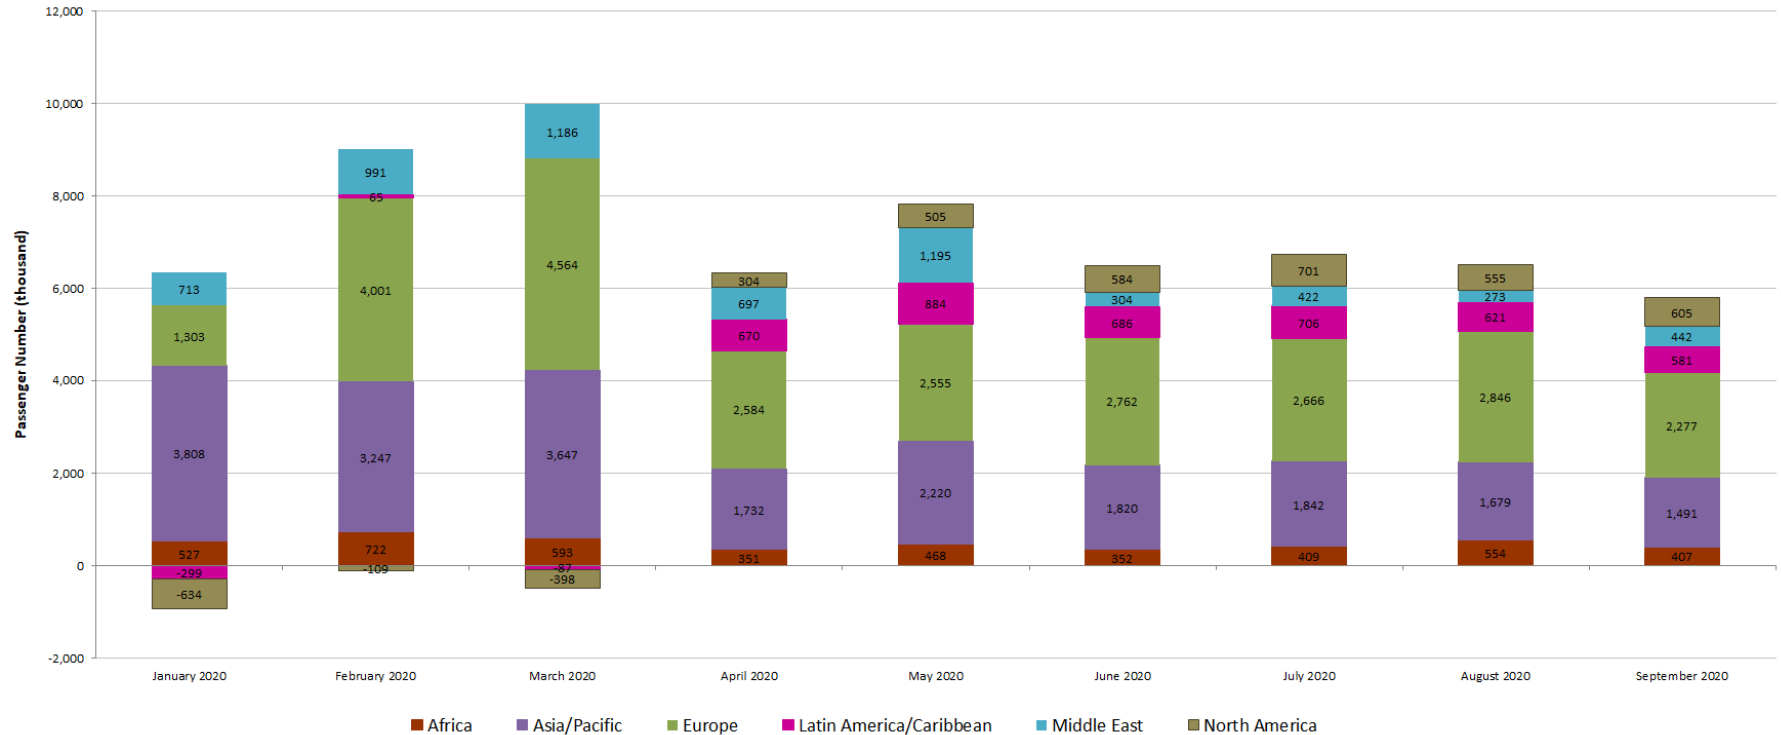

## North America

## Impact on International Passenger Numbers (Demand)

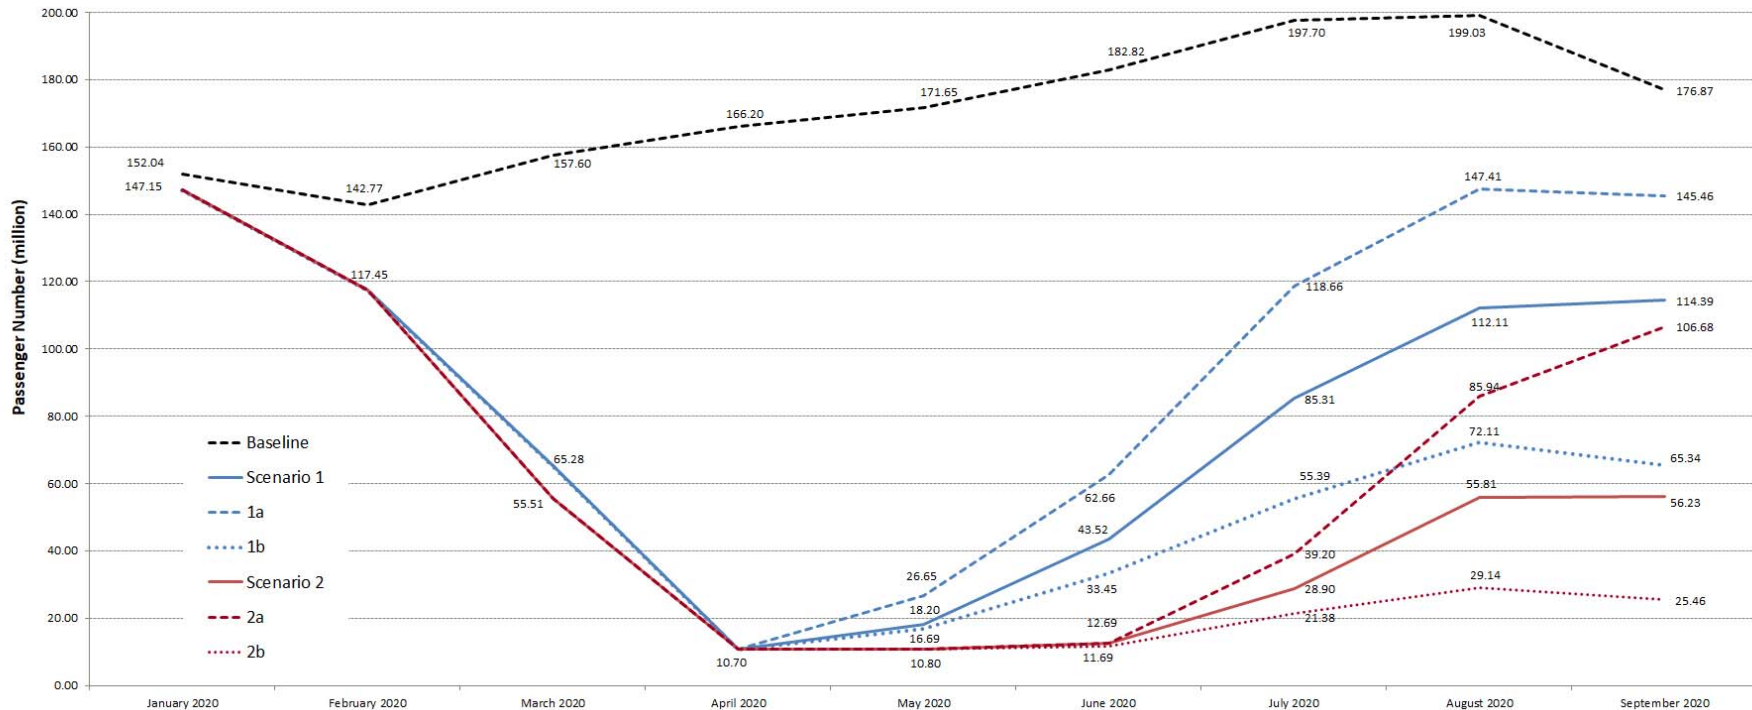

- Given the originally-planned seat capacity, passenger demand could have increased 64 million for the first 9 months of 2020, compared to the same period of 2019.
- According to the latest estimates, passenger demand could instead drop from the above Baseline by 705 to 963 million (Scenario 1) and 961 to 1,177 million (Scenario 2).
- This demand level would be 642 to 900 million (Scenario 1) and 897 to 1,054 million (Scenario 2) below the 2019 level.
- The most substantial demand reduction is expected to be in Europe, hitting summer travel peak season, followed by Asia/Pacific.

Note: Number of international passengers departing from each country and territory, which are aggregated at the regional level to avoid double counting

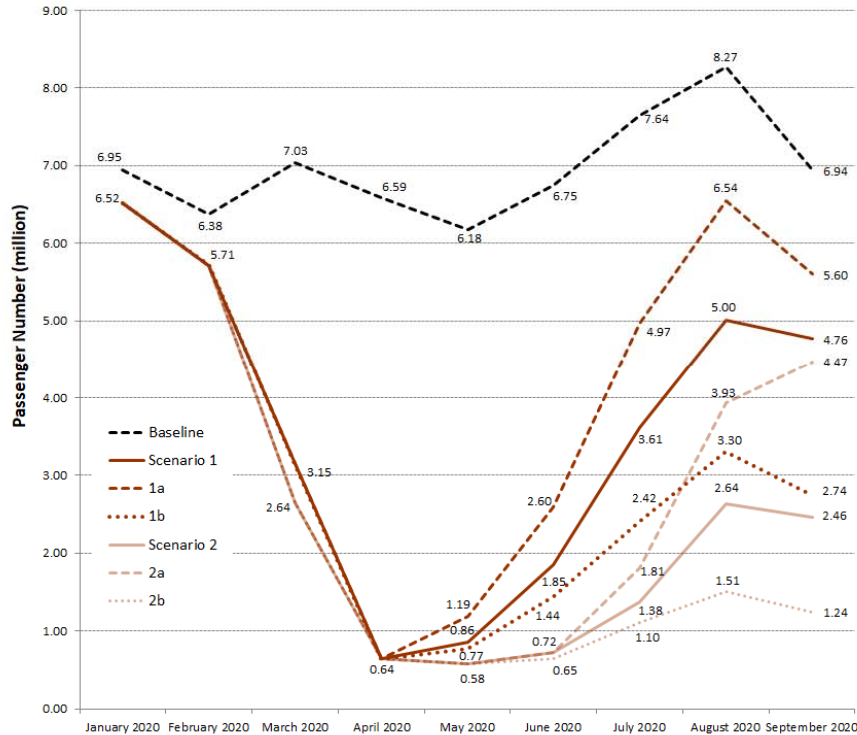

705 to 1,117 million less passengers than Baseline

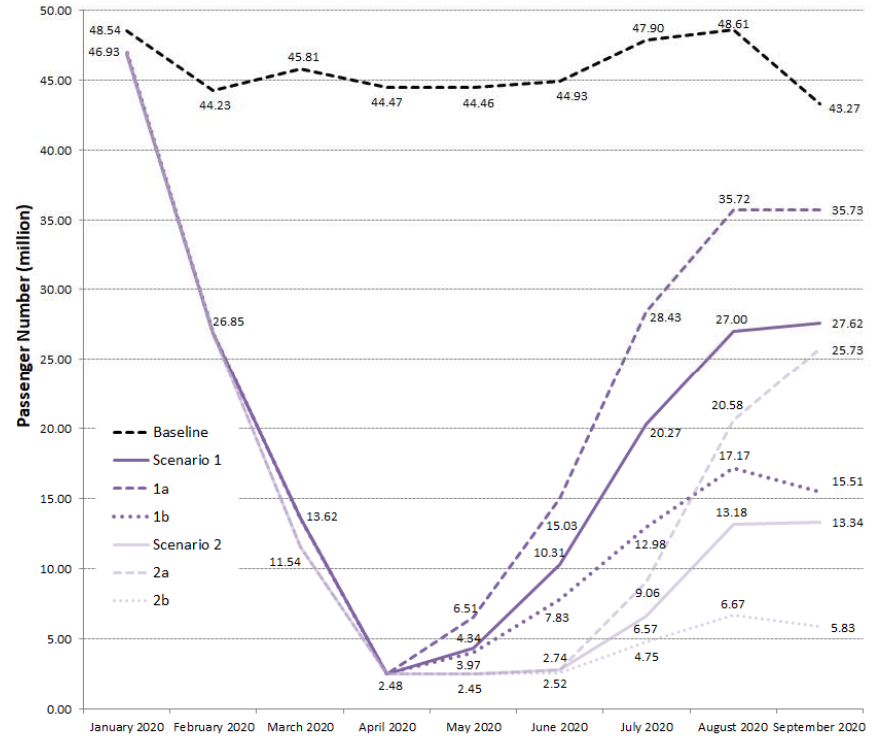

Note: Number of international passengers departing from each country and territory, which are aggregated at the regional level to avoid double counting

# Break-down of passenger number by region (1)

## Africa

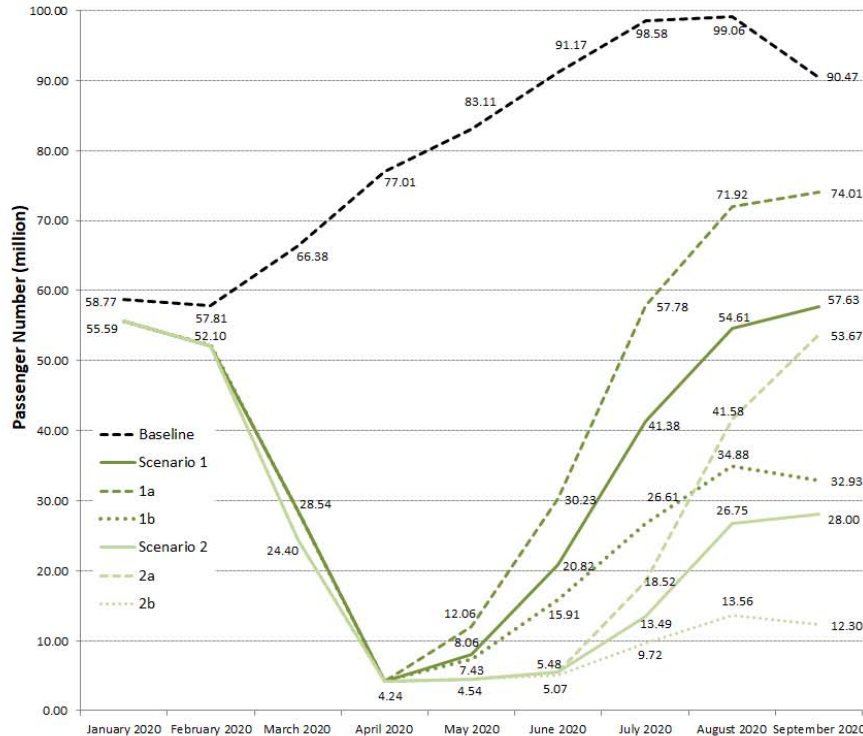

## Asia/Pacific

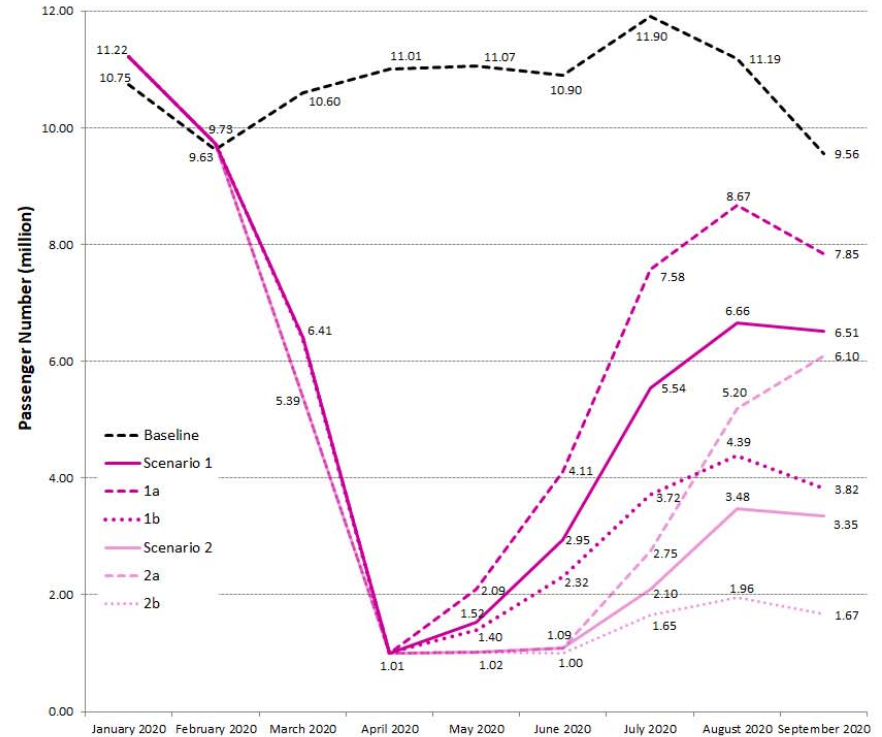

# Break-down of passenger number by region (2)

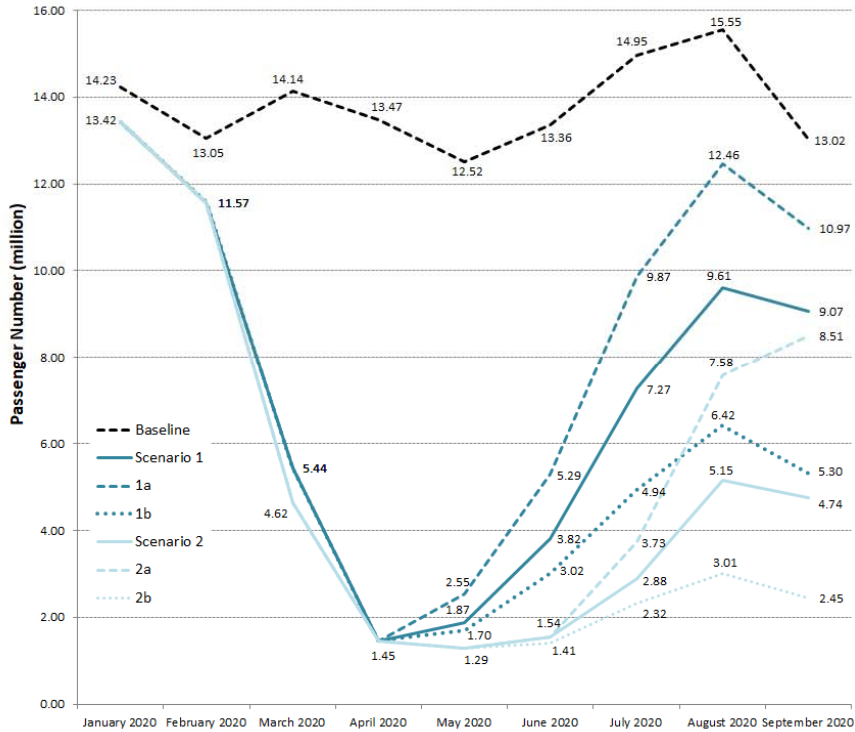

## Europe

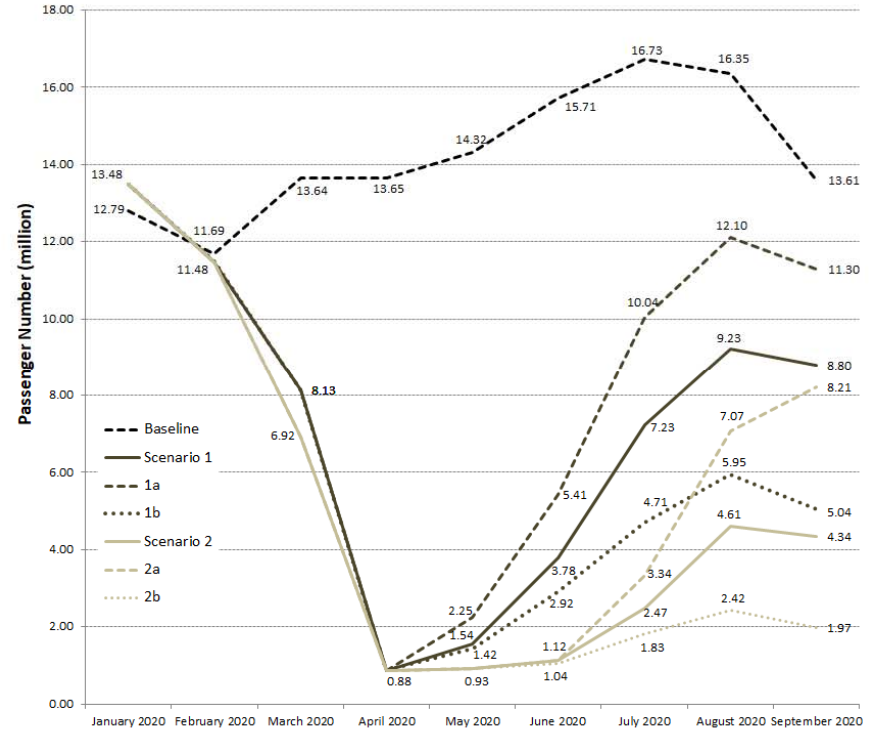

## Latin America/Caribbean

## Middle East

## North America

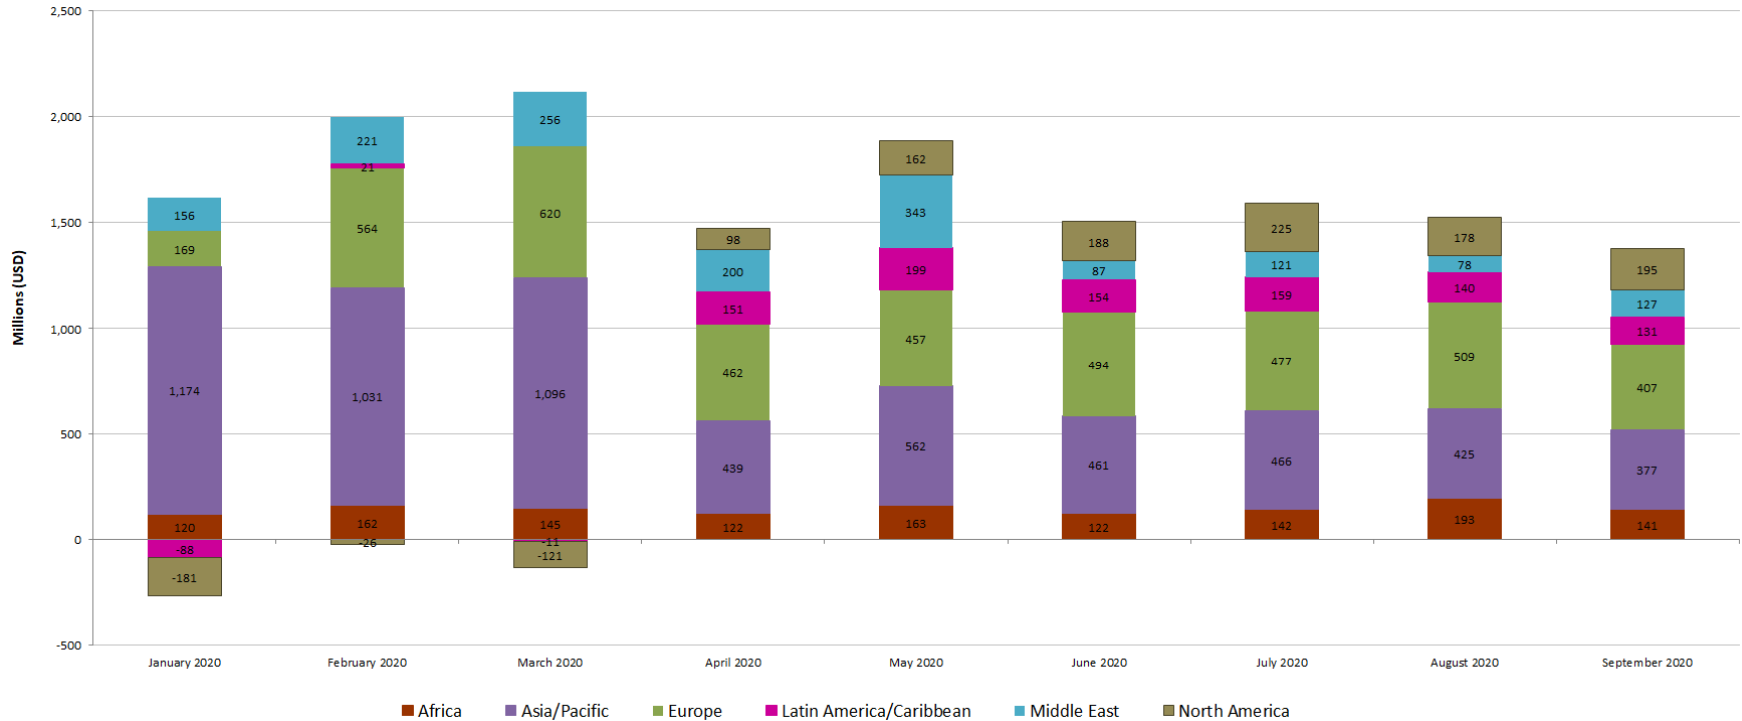

## Impact on Gross Passenger Operating Revenues of Airlines

- With the originally-planned seat capacity and trend line growth of demand, airlines' gross passenger operating revenues could have increased USD 15 billion for the first 9 months of 2020, compared to the same period of 2019.
- According to the latest estimates, airlines' revenues could instead plummet USD 160 to 218 billion (Scenario 1) and USD 218 to 253 billion (Scenario 2) below the above Baseline, or USD 145 to 204 billion (Scenario 1) and 203 to 238 billion (Scenario 2) below the 2019 level.
- Over two-third of revenue loss would be recorded by Asia/Pacific and Europe.

# Baseline: USD 15 billion increase of revenues year-on-year

Note: The above revenues are gross passenger operating revenues of all airlines serving international routes from each country and territory, which are aggregated at the regional level (revenues of international routes to each country and territory were removed to avoid double counting).

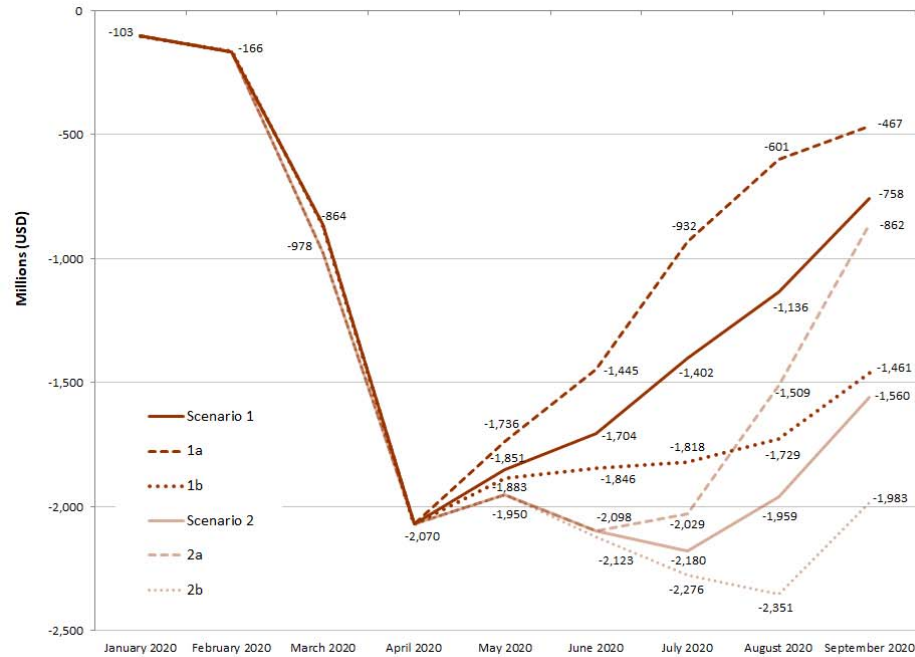

# Scenarios 1 & 2: USD 160 to 253 billion less revenues than Baseline

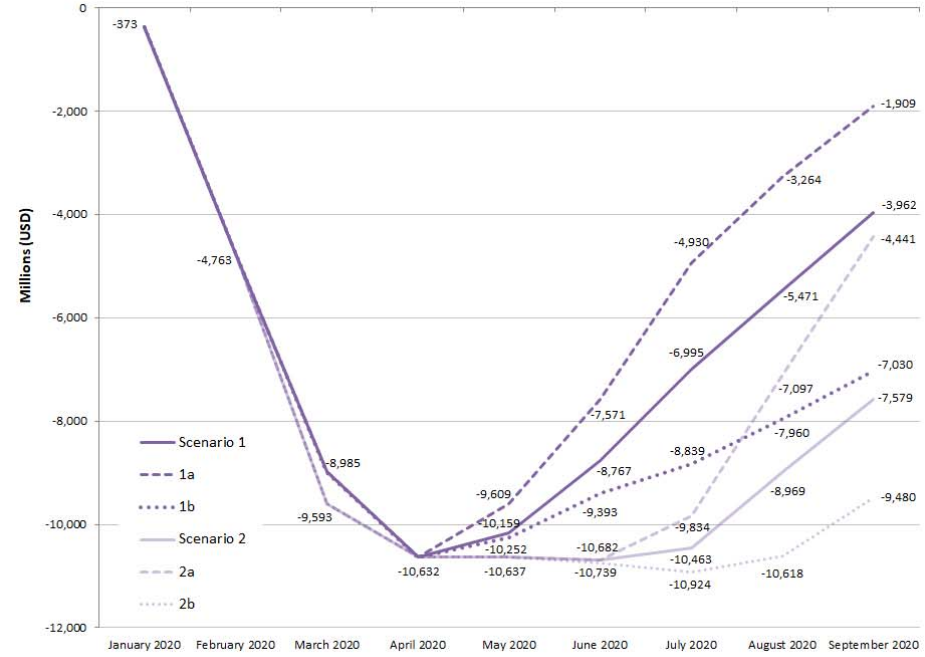

Note: The above revenues are gross passenger operating revenues of all airlines serving international routes from each country and territory, which are aggregated at the regional level (revenues of international routes to each country and territory were removed to avoid double counting).

# Break-down of revenue reduction by region (1)

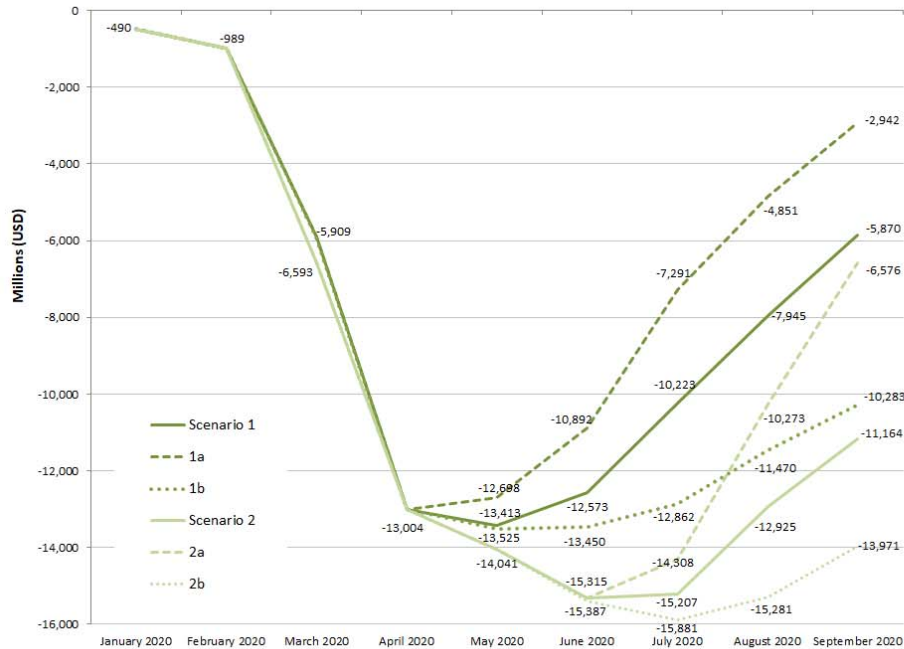

## Africa

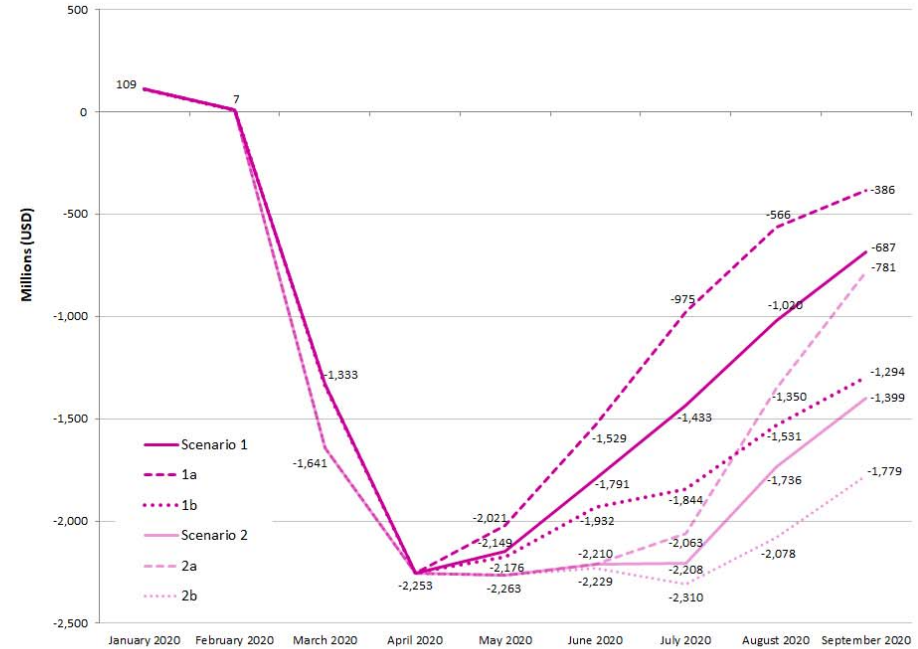

## Asia/Pacific

## Europe

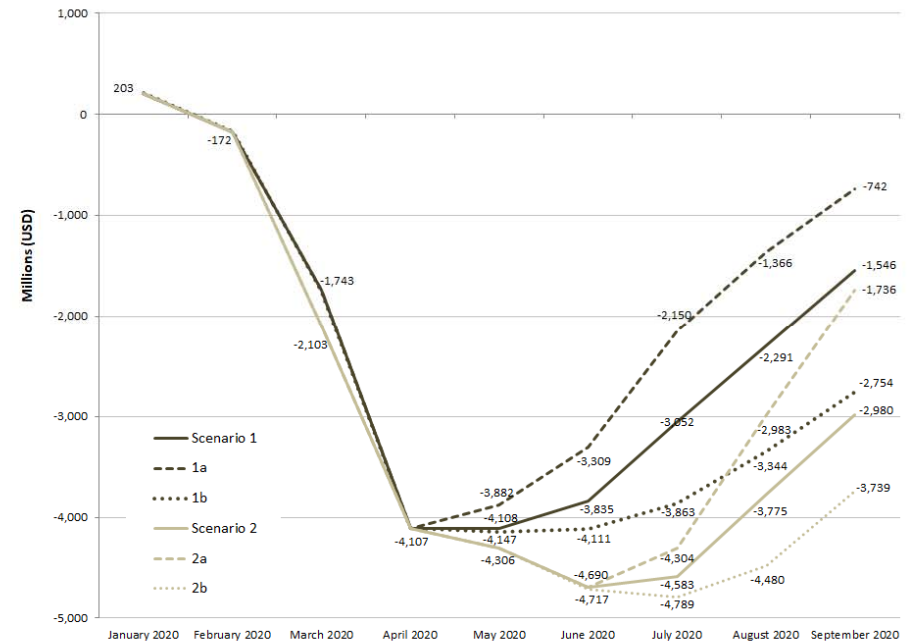

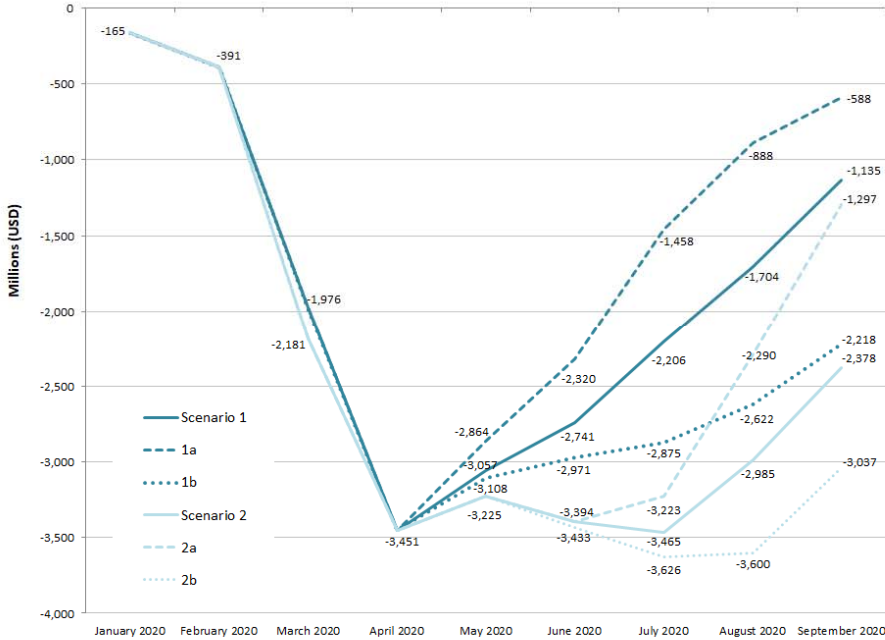

## Latin America/Caribbean

## Middle East

## North America

## Summary of Key Impact Indicators

Figures and estimates herein is **subject to substantial changes**, and will be updated with the situation evolving and more information available.

## Baseline compared to 2019 (year-on-year)

Month	Baseline (Originally-planned or business as usual)		
	Seat Capacity (%)	Passenger number (million)	Passenger revenue (USD, billion)
January 2020	3.2%	5.42	1.35
February 2020	6.1%	8.92	1.97

Ireland	-733,678	-21%
Greece	-635,039	-34%
Czechia	-610,048	-37%

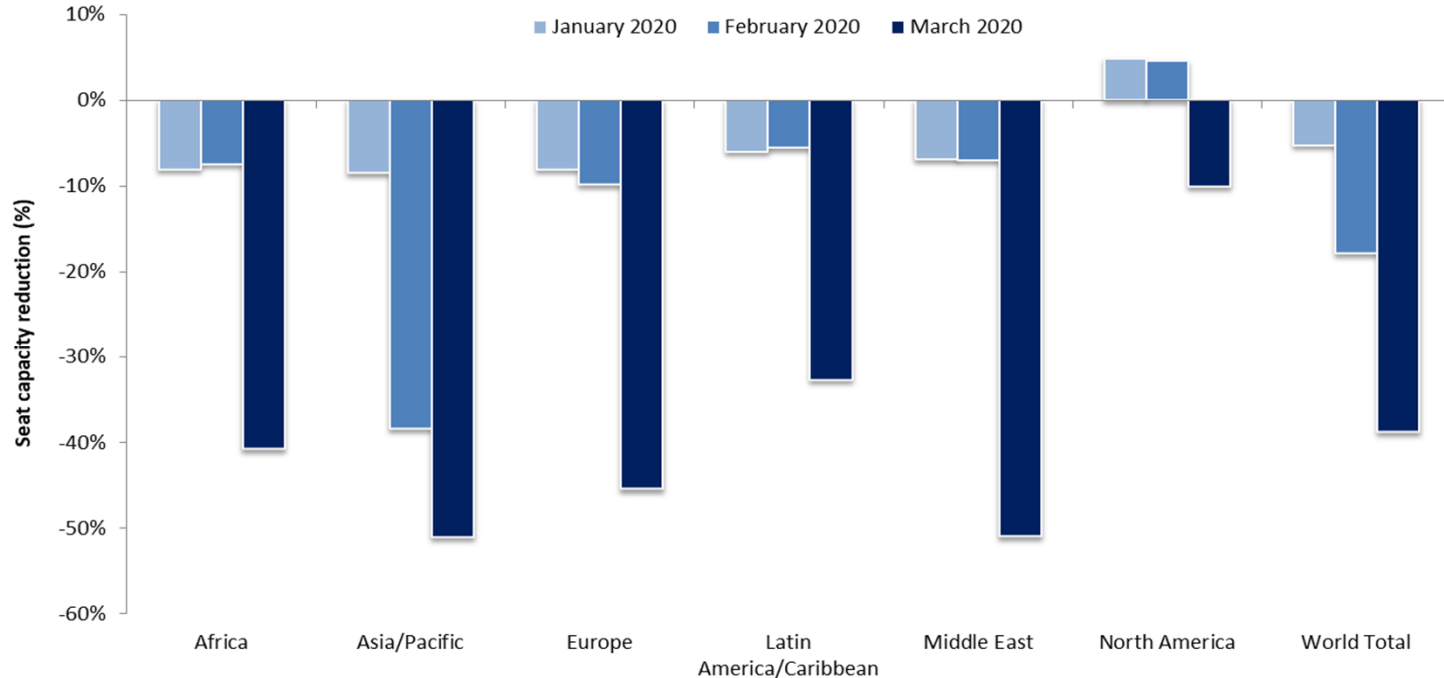

In March 2020, global international passenger capacity reduced by 49%, with significant reduction not only in States experiencing an early outbreak but also worldwide.

- State/Territory with 100 to 999 confirmed cases\*
- State/Territory with 1,000 to 9,999 confirmed cases\*
- State/Territory with 10,000 to 49,999 confirmed cases\*
- State/Territory with 50,000 or more confirmed cases\*

\*: Coronavirus Disease 2019 (COVID-19) Situation Report by WHO (31 March 2020)

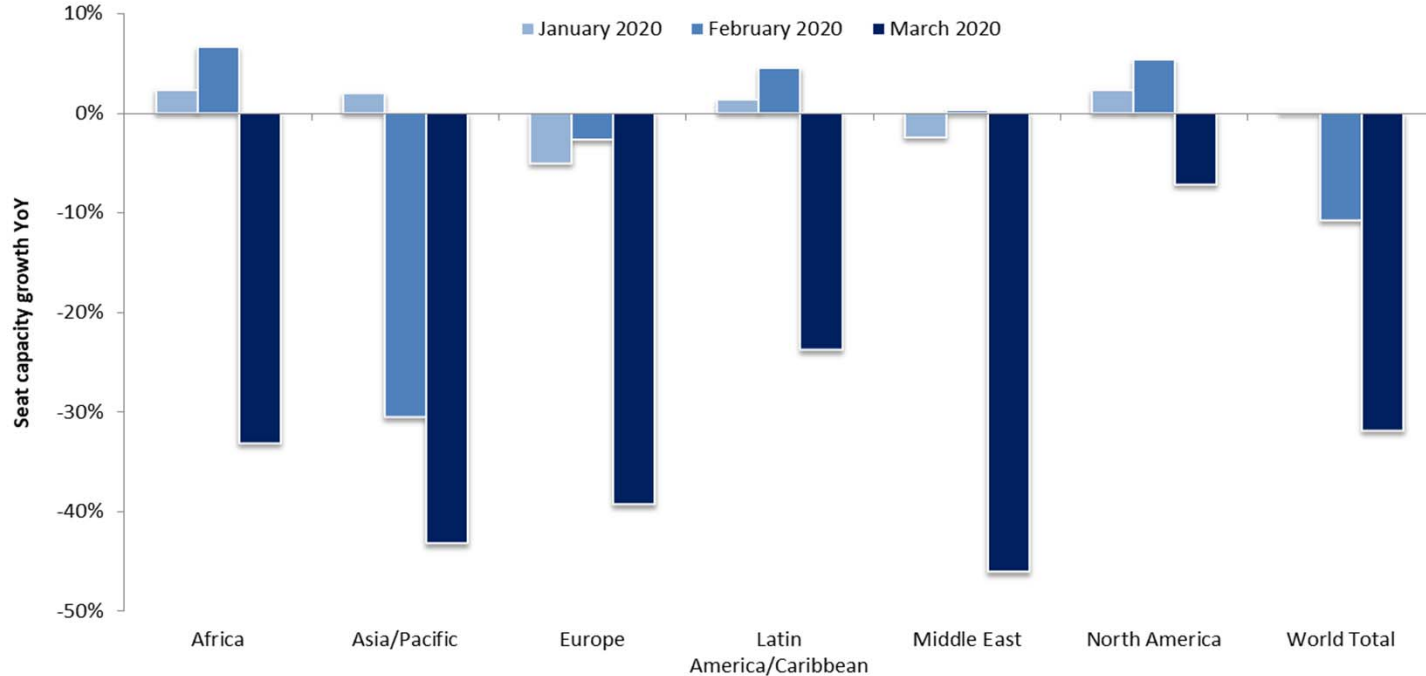

# Air traffic reduction no longer limited to initial outbreak countries

## Monthly seat capacity change compare to originally-planned by region (total international and domestic)

# Air traffic reduction no longer limited to initial outbreak countries (2)

## Monthly seat capacity change compared to 2019 by region (total international and domestic)

Total air cargo throughout declined by 19% in March 2020 YoY, with a significant withdraw of passenger aircraft belly cargo capacity while the increase in all-cargo freighters have offset the capacity reduction

Millions of Tonnes Transported			
	March 2019	March 2020	Change
Belly Cargo	3.49	2.40	-31%
Freighter Cargo	1.48	1.61	9%
<b>Net</b>	<b>4.97</b>	<b>4.01</b>	<b>-19%</b>

Preliminary analysis indicates air cargo revenues have dropped 22% from USD 8.3 to 6.5 billion in March 2020 over the same period

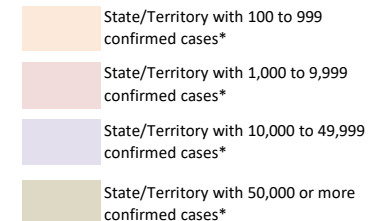

# The world reached 1 million confirmed COVID-19 cases in April 2020

## April 2020 International Passenger Capacity

Country/Territory	Capacity change from originally-planned	
United States	-22,915,300	-88%

# IATA: Airlines would lose USD 314 billion revenues under “3-month lock-down + recession” scenario

The analytical difference between ICAO and IATA estimates:

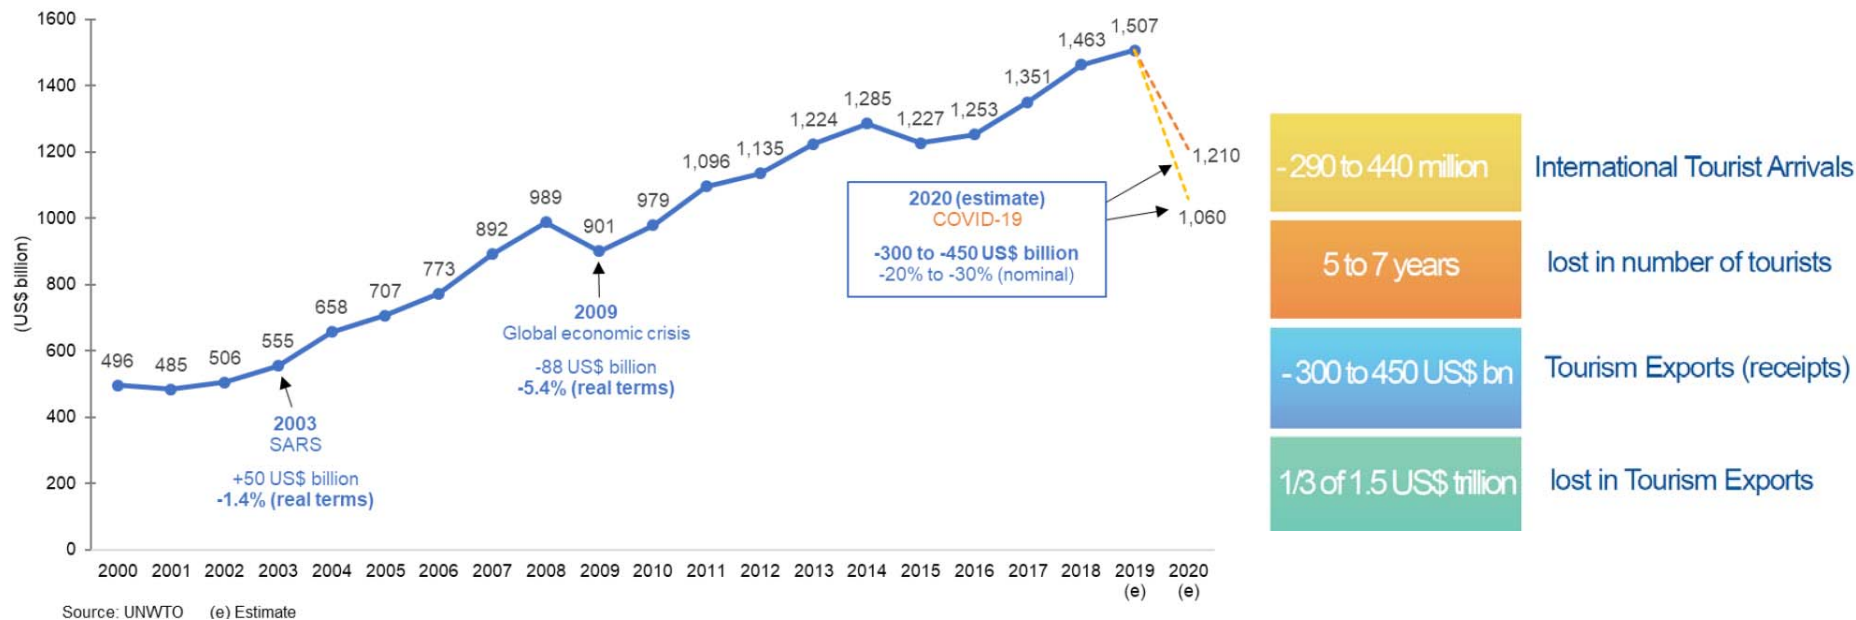

- **Period:** 1Q to 3Q 2020 (ICAO) vs. full year 2020 (IATA)
- **Traffic:** international only (ICAO) vs. both international and domestic (IATA)
- **Regional break-down:** by all traffic from States in each region (ICAO) vs. region of airline registration (IATA)
- **Baseline:** originally-planned i.e. 2020 business as usual scenario (ICAO) vs. 2019 level with 2020 airline schedules (IATA)

Region of airline registration	Revenue Passenger Kilometres (RPKs) - both international and domestic for full year 2020	Gross passenger revenue - both international and domestic for full year 2020
	year-on-year % change from 2019 level	USD billion, compared to 2019 level
