## **Introduction and Background**

# Air traffic has been vulnerable to external factors including disease outbreaks

# Previous outbreaks/pandemics had a V-shape impact on aviation

## Impact of past outbreaks on aviation

History shows that SARS has the most serious impact on traffic. At the height of the outbreak (May 2003), monthly RPKs of Asia-Pacific airlines were 35% lower than their pre-crisis levels. Overall in 2003, Asia-Pacific airlines lost **8% of annual RPKs** and **\$6 billion of revenues**.

# Disease outbreak directly impacts air traffic and revenues of aviation industry

## Number of cases / countries affected

- Flights cancellations
- Aircraft groundings
- Travel bans
- Border closures

## Traffic decline

- Fewer flights
- Lower load factors
- Impact on yield

## Revenue loss

- Proportionate to traffic loss
- Decline in unit revenues, especially in non-aeronautical (airports)

# COVID-19 outbreak has impacted air traffic for China starting from late January 2020

Note: The above includes a) international from mainland China, Hong Kong SAR of China, Macao SAR of China, Taiwan, Province of China; b) domestic within mainland China, and c) regional between mainland China and Hong Kong SAR, Macao SAR and Taiwan Province

# A surge of COVID-19 confirmed cases occurred in several States by late February 2020
